

COSMOS-P02

UNITED STATES PATENT AND TRADEMARK OFFICE

Provisional Application for Patent — Written Description

Method of dual-lane building with a peeking ban and a single disposer**ATTORNEY WORK PRODUCT — NOT A FILED PATENT APPLICATION — FOR COUNSEL ONLY****Docket:** COSMOS-P02**Kind:** Method / occupancy seating**Status:** FILE**Fee class:** \$65 micro-entity provisional**Date of this written description:** 2026-09-07**Name of inventor:** _____ (counsel to complete). The source tree discloses the operator as Keith. This preparer does not sign as inventor.**Preparer:** COSMOS Chief Coder session (not the inventor). Does not sign as inventor. Does not click USPTO.**Claims:** none herein. Counsel drafts claims. Paragraphs below are a written description under 35 U.S.C. 112(a).**Sister dockets:** COSMOS-P01 through COSMOS-P13. This provisional does **not** claim the benefit of a sister. Duplicate HOW_IT_WORKS.pdf into this filing.

This document is attorney work product prepared for counsel. It is not a filed application, not legal advice, and not a novelty opinion.

CROSS-REFERENCE TO RELATED DISCLOSURES

[0001] COSMOS-P01 through COSMOS-P13 are related written descriptions prepared the same day. A provisional cannot claim the benefit of a sister provisional. The how-it-works appendix is incorporated as if fully set forth and must be attached at filing. Do not add technical matter after a filing date (37 CFR 1.53(c)).

FIELD OF THE INVENTION

[0002] The present disclosure relates to seating two generative-model builders on the same decided work so that neither builder reads the other's context until compare, and so that only one disposer writes the live artifact tree.

BACKGROUND OF THE INVENTION

[0003] Shared-context debate lets a weak agent pollute a strong one. Builder-plus-nanny stacks a second seat hired to agree. OpenAI U.S. Patent No. 12,405,822 teaches a shared workspace - the anti-shape of this disclosure.

[0004] N-version programming and parallel contestants who later rank each other are related. They are identified below. This disclosure isolates two full builders, each of which must run, with a peeking ban until compare, plus a single pen.

BRIEF SUMMARY OF THE INVENTION

[0005] After consensus names the work, spawn two builder attempts. Each attempt has a private workspace and a private context. Neither builder may read the other's context, branch, or intermediate artifacts until compare. Each attempt must produce a running spike. Compare is a later consensus step, not a silent merge by a third model. The live tree has one writer. Builders propose; they do not hold the pen.

DEFINITIONS

[0006] As used herein, "Peeking ban" means A prohibition on a builder reading another builder's context, branch, or intermediate artifacts until a later compare step.

[0007] As used herein, "Disposer" means The single writer of the live tree. Also called chief coder or CCr in the source tree.

[0008] As used herein, "Propose" means To produce an artifact in a private workspace without writing the live tree.

BRIEF DESCRIPTION OF THE DRAWINGS

[0009] FIG. 1 shows two builder lanes, each with a private workspace and private context, a later compare step, and a single disposer who alone writes the live tree. A dashed prohibition marks peeking.

[0010] The drawings are described in prose so that a person of ordinary skill can produce sheet drawings. Sheet drawings may be added by counsel before filing. Do not add new matter after a filing date.

DETAILED DESCRIPTION

[0011] After CONSENSUS names the work, spawn two builder attempts (Lane A and Lane B).

[0012] Give each attempt a private workspace and a private context. Do not share a transcript. Do not share a branch. Do not share intermediate artifacts.

[0013] Enforce the peeking ban until compare. A builder that reads the other lane is out of occupancy.

[0014] Each attempt must produce a running spike. A design that does not run is not a dual-lane result.

[0015] Compare is a later consensus step. Do not silently merge by a third model.

[0016] The live tree has one writer (COSMOS-P05). Builders propose. They do not hold the pen.

[0017] In a preferred embodiment Lane A is a Grok-class builder and Lane B is a Cursor-class builder on a branched tree. Gitur (GitHub, GitLab, Cursor) is the BUILD surface. The orchestrator does not author the live-tree implementation in-band.

[0018] This is two builders, not builder-plus-checker. A linter or critic seat is COSMOS-P01 CRITICS, not a second builder.

BEST MODE

[0019] Gitur dual-lane as operated 2026-09-04 and following: Lane A Grok 4.6 work-order session; Lane B Cursor Cloud Agent; same DEFINE text; no shared context; CCR disposes after review. Encoded docs/ADVERSARIAL_LOOP.md.

FURTHER EMBODIMENTS

[0020] Forge seats forge.ccr plus forge.adv_N are a product seating of the same occupancy. The chief-coder seat is locked to a named model in a preferred embodiment.

DISCLOSURE CLOCK (ALREADY PUBLIC)

[0021] Dual-lane is described in public cosmos MOTIF (repository created 2026-08-23). Gitur dual-lane (Grok plus Cursor) is operational occupancy, not a secret.

INFORMATION CONCERNING RELATED ART (NOT AN IDS; NOT A NOVELTY OPINION)

[0022] Related: Galapagos N-version LLM arXiv:2408.09536; N-Version Programming with Coding Agents arXiv:2606.20158; Croto arXiv:2406.08979; IBM US20260252812A1; Avizienis 1985; Knight and Leveson 1986. Anti-shape: Twilio US20250165890A1 and AgentCoder (builder-checker); OpenAI U.S. 12,405,822 B1 (shared workspace); Aider Architect/Editor (executor sees the plan).

[0023] This search did not find a granted United States patent that forbids two coding agents from reading each other's context as the inventive occupancy. Unpublished applications are unknown.

WHAT THIS DISCLOSURE IS NOT

[0024] Not two agents coding in parallel in a shared chat. Not N-version at runtime with a voter. Not shared-ledger multi-agent. Not builder-plus-linter.

STATEMENT OF INVENTION (NOT CLAIMS)

[0025] Isolating two full builders (each must run) with a peeking ban until compare, plus a single disposer on the live tree.

[0026] Counsel may draft claims. The foregoing is a statement of invention, not a claim set under 35 U.S.C. 112(b).

APPENDIX TO ATTACH AT FILING

[0027] HOW_IT_WORKS.pdf (APP_OS: SCAR, ROLD, carry-over; APP_COSMOS; APP_CRUCIBLE; APP_BTS_MESH). Duplicate the appendix into this provisional at filing. A provisional cannot claim benefit of a sister.
